

Project Brief

Runway Rehabilitation, Apron Expansion, Taxiway Development and Various Projects Luverne, MN Municipal Airport

DGR Engineering completed a recent apron expansion and runway rehabilitation project. DGR is currently designing a hangar area taxiway project. DGR previously provided design and construction services for the \$3 million development of a new runway and taxiway. DGR has also managed new hangar facilities, drainage projects, pavement rehabilitation, and other related projects for a total cost of improvements at the airport of over \$5 million. Current active projects include: new hangar area development, taxiway design, AWOS relocation, and private hangar development.

Improvements:

- Runways/Taxiways
- Electrical systems
- Fuel systems
- Hangar development
- Navigational aids
- Runway maintenance
- Utility systems
