

Project Brief

East Campus & Green Space Improvements Dordt College Sioux Center, Iowa

- Improved surface water drainage
- Reconfigured use of exterior spaces

DGR worked with college staff to improve the surface drainage surrounding the East Campus apartments as well as enhancing the Campus Green Space on this project.

The East Campus apartment portion of the project included storm sewer upgrades, pedestrian facilities and enhanced grading around the existing buildings to improve surface water drainage.

One of the college's goals with this project was to remove parking from the heart of the campus, the Campus Green Space. This was accomplished by reconfiguring the parking, vehicular access points to East Campus and Covenant Hall and by converting the Campus Green Space back into a pedestrian friendly central corridor.

- Site redevelopment with parking and pedestrian facilities
